

Triangles made from paper clips are shown below. For each triangle, find the total length of 2 sides and 3 sides, measured in paper clips.

- a. Find the total length of any 2 sides.

$$\begin{array}{c} \underline{\hspace{1cm}} \\ \text{1 side} \end{array} + \begin{array}{c} \underline{\hspace{1cm}} \\ \text{1 side} \end{array} = \begin{array}{c} \underline{\hspace{1cm}} \\ \text{2 sides} \end{array}$$

- b. Find the total length of all 3 sides.

$$\begin{array}{c} \underline{\hspace{1cm}} \\ \text{2 sides} \end{array} + \begin{array}{c} \underline{\hspace{1cm}} \\ \text{1 side} \end{array} = \begin{array}{c} \underline{\hspace{1cm}} \\ \text{3 sides} \end{array}$$

- c. Find the total length of any 2 sides.

$$\begin{array}{c} \underline{\hspace{1cm}} \\ \text{1 side} \end{array} + \begin{array}{c} \underline{\hspace{1cm}} \\ \text{1 side} \end{array} = \begin{array}{c} \underline{\hspace{1cm}} \\ \text{2 sides} \end{array}$$

- d. Find the total length of all 3 sides.

$$\begin{array}{c} \underline{\hspace{1cm}} \\ \text{2 sides} \end{array} + \begin{array}{c} \underline{\hspace{1cm}} \\ \text{1 side} \end{array} = \begin{array}{c} \underline{\hspace{1cm}} \\ \text{3 sides} \end{array}$$
