

1.

$$5 \times 4 = \underline{20}$$

Number of groups: 5Size of each group: 4Total: 20

2.

$$5 \times 2 = \underline{\quad}$$

Number of groups: _____

Size of each group: _____

Total: _____

3.

$$5 \times 3 = \underline{\quad}$$

Number of groups: _____

Size of each group: _____

Total: _____

4.

$$5 \times 5 = \underline{\quad}$$

Number of groups: _____

Size of each group: _____

Total: _____

1.

$$5 \times 2 = \underline{10}$$

Number of groups: 5
 Size of each group: 2
 Total: 10

2.

$$5 \times 4 = \underline{\quad}$$

Number of groups: _____
 Size of each group: _____
 Total: _____

3.

$$5 \times 3 = \underline{\quad}$$

Number of groups: _____
 Size of each group: _____
 Total: _____

4.

$$5 \times 5 = \underline{\quad}$$

Number of groups: _____
 Size of each group: _____
 Total: _____

1.

$$5 \times 7 = \underline{\quad}$$

Number of groups: _____

Size of each group: _____

Total: _____

2.

$$5 \times 9 = \underline{\quad}$$

Number of groups: _____

Size of each group: _____

Total: _____

3.

$$5 \times 6 = \underline{\quad}$$

Number of groups: _____

Size of each group: _____

Total: _____

4.

$$5 \times 8 = \underline{\quad}$$

Number of groups: _____

Size of each group: _____

Total: _____

In each model, an ellipsis is used as a shortcut for showing equal groups.

- a. The ellipsis represents group _____ and group _____.

- b. The ellipsis represents group _____ thru group _____.
